

No-spill water carriers

Plastic water containers with spouts and lids are very handy, but you may not always have one available.

When you are hauling water in buckets, one way to make sure that you don't accidentally spill it, is to put a plastic dustbin bag into the bucket. Fill the plastic bag with water and tie a knot at the top of the bag. The water cannot splash out, even if the bucket tips.

You can transport water this way in a wheelbarrow, in the trunk of a car, or on the back of a bakkie or trailer. Once you arrive at your destination, just untie the bag, fold the top of the plastic bag down over the sides of the bucket, and pour out the water into the trough or container where you need it.
