

# What to look at before using a bottle of medicine

For example, Terramycin LA injectable will be used.

Make a  if you agree with the question:

## Medicine used for:

**Cattle:** Gall sickness, heart water, pneumonia, foot rot, joint-ill, navel-ill and pink eye.

**Pigs:** Pneumonia, joint-ill and navel-ill.

**Sheep and goats:** Heart water, pneumonia, foot rot, joint-ill and navel-ill.

• Do I want to treat any of the above problems?

## How to use it:

Inject into muscle or under the skin.

• Do I know where to inject the animal?

## Storage:

Store below 30°C, keep out of sunlight, keep top rubber clean.

• Was this product stored correctly, so that I can still use it?

## Dosage:

1ml per 10kg: If my animal weighs 250kg how many millilitres do I inject?

$250/10 = 25$  ml. Take the animal's body weight (kg) and divide by 10, because each ml will treat 10kg. This means a quarter of a 100ml bottle for one treatment of a 250kg animal.

• Do I know how much to inject the animal?

## Withdrawal periods:

Do not eat the meat for the next 28 days after last treatment. Do not drink the milk for the next 5 days after last treatment.

• Do I understand the withdrawal periods?

If all the blocks are ticked  - go ahead and treat. If not, STOP, don't treat the animal, as this can have detrimental effects. Contact your Pfizer representative or animal health technician.

Read instructions

## Why do we have to look at the following?

- **Indicated for:** It won't help to use a product if it wasn't developed for the problem you have with your animal.
- **Storage:** If the temperature went above indicated highest temperature for a longish period, the product might not work as it should. Some products (vaccines) might not work at all.
- **How to use it:** If injected wrongly, the animal could die or the product won't work.
- **Dosage:** Giving too little will not help the animal and could lead to antibiotic resistance, which means that the product will not work if needed and applied later on.
- **Withdrawal periods:** To ensure human disease-causing bacteria do not develop antibiotic resistance through low levels of exposure when humans consume animals or animal products. To ensure humans are not exposed to medicines that may be detrimental to their health.

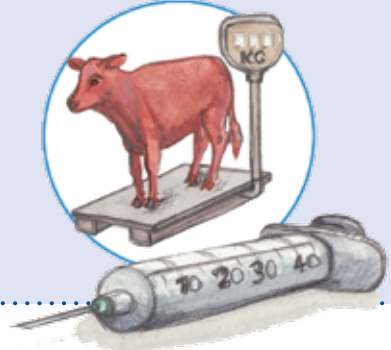

## Injecting medicine

**Important:** Always read the label on the bottle or packaging before injecting the animal with any medicine.

Ask yourself the following questions:

- What disease does this medicine treat?
- What kind of animal can be injected?
- Where do you inject the animal?
- How should it be stored?
- How much should I inject?
- How long before the meat or milk may be used by humans?

Weight determines dosage

## Medisyne-ingspuitings

**Belangrik:** Lees altyd die etiket op die bottel of verpakking voordat jy enige dier met medisyne inspuit. Kyk na die vervaldatum.

Vra jouself die volgende vrae:

- Watter siekte word met hierdie medisyne behandel?
- Watter soort dier kan ingespuit word?
- Waar moet die dier ingespuit word?
- Hoe moet dit gebêre word?
- Hoeveel moet ek inspuit?
- Hoe lank voordat die vleis of melk deur mense verbruik mag word?

## Ho hlaba ente

**Taba ya bohlokwa:** Ka mehla o bale leibole botlolong kapa paketeng pele o enta phoofolo ya hao ka moriana ofe kapa ofe.

Ipotse dipotso tse latelang:

- Moriana ona o sebedisetswa ho alafa lefu lefe?
- Ke phoofolo ya mofuta ofe e ka entwang ka moriana ona?
- Phoofolo e entwa hokae?
- Moriana o lokela ho bolokwa jwang?
- Ke tshwanetse ho enta moriana o mokae?
- Nako e telele hakae pele nama kapa lebese le ka sebediswa ke batho?

---

## Umuthi wokujoa

**Kubalulekile:** Funda njalo ilebula elisebhodleleni noma elisephaketheni ngaphambi kokuthi ujove isilwane sakho nganoma yimuphi umuthi.

Zibuze imubuzo elandelayo:

- Umuthi usetshenziselwa ukulapha liphi igciwane?
- Nhlobo yiphi yesilwane engajoviwa?
- Usijova kuphi isilwane?
- Kumele ulondolozwe kanjani?
- Kumele ngijove kangakanani?
- Inyama nebisi kumele zithathe isikhathi esingakanani ngaphambi kokuthi zisetshenziswe ngabantu?

---

## Ukutofa iyeza

**Okubalulekileyo:** Soloko uyifunda ilebhule esebhotileni okanye kwipakethe phambi kokuba utofa isilwanyana sakho ngalo naliphi na iyeza.

Zibuze le mibuzo ilandelayo:

- Sesiphi sifo iyeza elisetyenziswa ukusinyanga?
- Hlobo luni lwesinyana esinokutofwa?
- Usitofa phi isilwanyana?
- Kufuneka sigcinwe njani isitofu?
- Kufuneka nditofe okungakanani?
- Kufuneka ibe lixsha elingakanani phambi kokuba inyama okanye ubisi lwesilwanyana ebesitofwe lube nokusetyenziswa ngabantu? **UMI**
